Education

2021 - 2026

Computer Science Engineering

Tashkent University of Information
Technologies named after
Muhammad Al-Khwarizmi

2022 - 2023

Studied programming at
PDP Academy Education Center

Experience

2023 - Present

During 2022 and 2023, I immersed myself in the IT field and actively participated in various projects, including Uzum Market API, drf-e-commerce DigitalSAAS, and Falcon Multi-brand online store development using DRF (Django REST Framework). Additionally, I have successfully developed personal Telegram bots.

I consider working as a team member to be crucial for me. I enjoy finding simple and efficient solutions and strive for precision and accuracy in my work.

About Me

I am a backend developer with extensive experience in creating high-quality web applications.

I have strong expertise in working with Python programming language, specifically using Django, Django REST Framework (DRF), and Restful API.

Using Python and Django, I excel at building and managing high-quality web applications. I am skilled in developing RESTful APIs using Python and DRF.

I have a solid understanding of working with databases, designing and optimizing data structures. Additionally, I have expertise in developing Telegram bots using the aiogram library.

I ensure smooth communication and data exchange between the frontend and backend components of applications. Security is also one of my priorities, and I implement authentication mechanisms to ensure data protection.

I am committed to delivering technical tasks promptly and with excellent quality. My goal is to provide the best technical guidance for each project and align it with the organization's objectives. I am eager to collaborate with you to enhance your projects and contribute to their growth.

For any additional information, please feel free to contact me via email at cybersnic@gmail.com

Technical Skills

Python Django, DRF (Django REST Framework), FI RESTful API development PostgreSQL, SQLite, SQLAlchemy (Python ORM) Docker, containerization Redis, in-memory data store Celery, distributed task queue Postman, API development and testing tool Telegram Bot development using libraries like Aiogram, Pyrogram Git, GitHub, GitLab for version control and collaboration Heroku, DigitalOcean for deployment and hosting Asyncio, asynchronous programming in Python Jinja2, templating engine for Python Linux (Ubuntu), operating system for development and deployment

Projects
